Of all the rose varieties, Rosa Damascena remains the ultimate symbol of feminine beauty and has played a central role throughout the ages in perfumery and cosmetics. Rosa Damascena, sometimes called Apothecary Rose, is an ancient, highly fragrant botanical variety, grown mainly in Eastern Europe. Alembic's Apothecary Rosa hydrosol is sourced from Turkey, where prized roses are cultivated under certified organic growing conditions. The blooms are picked early in the dewy morning to preserve vitality, and then slow-distilled to produce a delicate yet intensely floral toner for all skin types.

Ylang ylang has long been considered an aphrodisiac known to induce unadulterated joy. The literal translation from the Malayan botanical name, odorata, is 'the fragrant flower of flowers.' A native of Indonesia, ylang ylang stills grows wild in Molucca and Samoa and has long been coveted by perfumers for its unique and highly sensual aroma. The mature, yellow flowers are hand-harvested early in the dewy morning and then steam distilled to produce a sweetly tropical hydrosol that can be sprayed over the face and body.
